

JIANFENG CHEN

(919)-457-2034 ♦ <http://jianfeng.us> ♦ jchen37@ncsu.edu

EDUCATION

PhD in Computer Science

Aug 2014 - May 2019 (expected)

North Carolina State University, GPA: 4.0/4.0

Coursework: Data-to-Knowledge | DevOps | Advanced AI | Algorithm Analysis | Data Mining | Automated SE

BS in Computer Science

Sep 2010 - May 2014

Shandong University, China, GPA: 91.1/100

Coursework: Data Structure | OS | Networking | Database System | Numerical Analysis | Image Processing

SKILLS AND INTERESTS

Language: Python, C++, Java, JavaScript, Matlab and SQL;

Data analysis tools: Scikit-learn, SciPy, Pandas, jMetal, Gephi;

DevOps tools: Jenkins, Ansible, Travis-CI, AWS Elasticsearch, S3, Docker, Redis.

INTERN AND RESEARCH EXPERIENCE

Cross-Stan: Embedding Bayesian Modeling in Python and C++ Programs

May 2018- Aug 2018

Internship at Facebook (Machine learning experience group)

- Created the tool *CxStan* to embed Bayesian Modeling engine, Stan, into Python and C++ programs;
- Built a hierarchical framework to accelerate the Monte Carlo Sampling for the Stan modeling;
- Integrated the tool into the buck build tool, making the Stan engine as a service;
- Applied the *CxStan* to some Facebook services' traffic policing.

Automated Configurations for Cloud-based Workflows

May 2017 - Aug 2017

North Carolina State University

- Presented a novel stochastic method for rapidly configuration cloud-based workflows;
- Automatically deployed the workflow with more than 500 sub-tasks to AWS platform. Save up to 30% economy cost within specific deadline requirement, compared to default greedy deployment policy in AWS.

LACE Data Privatization Tools and its Application

Aug 2016 - Nov 2016

NSA funded project in RAISE Lab

- Distributed a data anonymization package in Python (see <http://tiny.cc/pydp>); tested package via Travis-CI;
- Applied my package to education and medical data sets. Evaluate data set utility through supervised learning.

Fast Principal-component-analysis (F-PCA) Method for Flight Status Log

May 2016 - Aug 2016

Google Summer of Code program 2016

- Accepted by Google GSoc2016 program among 18,981 applicants (**accept rate: 6%**);
- Hierarchical clustering a dataset(flight status log) with more than 20M entries top-down and bottom-up. Create a PCA-like dimension reduction algorithm and speed it up by spark. Compared my own algorithm with PCA.

SELECTED COURSEWORK PROJECTS

Building Movie Recommendation System: Built a movies recommendation system by training from 100 million Netflix ratings by Factorization Machine, SVM and ANN. Accelerated the learning process with HPC server.

Continuous Integration/Delivery Pipeline: Basing on abstract syntax tree, created a regression test suite generator; integrated Ansible scripts, Docker and Jenkins to build and deploy our "sunrise-calculator" app.
